**Notes**

NB: Unless otherwise indicated, the products on our price list only specify dB values which is assumed to be dBd.

To determine the dBd value, take the dBi value and add 2.15 to it.

To summarise:	dB = dBd = dBi - 2,15 = U/GAIN	e.g. 0 dB = -2.15 dBi = 0 dBd = UNITY GAIN	
	dBi = dBd + 2,15	e.g. 0 dBi = 2.15 dBd	1 dBi = 3.15 dBd
	dBq = dBi - 2	e.g. 0 dBi = 0.15 dBq	1 dBi = 1.15 dBq

### Coverage Enhancement

### In-building solutions (IBS) & Distributed Antenna Systems (DAS)

WEBB supplies a huge range of splitters, couplers, tappers, combiners and repeaters to use in coverage enhancement solutions.

Frequency range includes 698-2700MHz. This range includes a wide variety of connector options. Prices for these components available on request.

### ION-E: Unified Wireless Infrastructure

**PASSIVE LOW-PIM COMPONENTS FOR DISTRIBUTED ANTENNA SYSTEMS**

Be connected everywhere today.

We'll bring you excellent signal inside buildings.

Reach all your users inside your cellular network.

Especially in lower floors where signal is poor, we've got you covered wherever you are.

We offer you a broad range of coaxial RF to cover the need for such products and to meet the heterogeneous requirements of each site.

Due to the tendency of higher requirements regarding PIM levels, Telegärtner only offers low-PIM components ( $\leq -161$  dBc) in the standard portfolio.

Future-proof components for frequencies up to 3.8 GHz are available for 5G applications.

Customized solutions are available on demand.
